

THE STABILIZER CAM

M O U N T

THE STABILIZER CAM is designed to screw directly into the front of your bow.

This mount features a patented shock and recoil absorbing system that allows your video camera to float forwards and backwards during the arrow release process.

Allowing for smooth filming of your hunt while it happens giving you hunting memories to share with family and friends that will last for generations.

When you are target shooting without your video camera attached to your bow, turn THE STABILIZER CAM works as an ideal shock absorber to absorb the excess vibration that occurs when the arrow is released. You will find that THE STABILIZER CAM MOUNT will work better than any \$200 regular stabilizer currently being sold because of its one of a kind design. Better accuracy and less vibration.

MADE IN THE USA PATENTED AND HAS PATENTS PENDING
Made from Forged Military Aluminum & Stainless Steel
